Table of Contents

Supported Features

The ISPAPI Pricing Importer add-on supports the following features:

- Load TLDs with prices through three possible ways
    - HEXONET costs
    - HEXONET Price Classes
    - Custom CSV file
- Update existing extensions
- Flexible performance of step-wise pricing imports
- Support for different currencies
- Bulk price update by using a factor or a fixed amount
- Edition of prices individually
- Supported fields:
    - TLD
    - Register/Transfer/Renew pricing
    - DNS Management
    - Email Forwarding
    - ID Protection
    - EPP Code
    - Currency

Deleting extensions can only be done manually in the WHMCS backend.

Installation

Copy all files from the **install/** subdirectory to your WHMCS installation root directory (**$YOUR_WHMCS_ROOT**), while keeping the folder structure intact.

E.g.

```
install/modules/addons/ispapidpi/ispapidpi.php
=> $YOUR_WHMCS_ROOT/modules/addons/ispapidpi/ispapidpi.php
```

Configuration

Addon activation

Within the WHMCS Admin area, go to

Setup => **Addon Modules**

» ISPAPI Pricing Importer Quickly update your WHMCS domain pricing list.	2.0	HEXONET	Activate	Deactivate	Configure

Admin username	admin	[REQUIRED]
Access Control	Choose the admin role groups to permit access to this module: ☑ Full Administrator ☐ Sales Operator ☐ Support Operator	

Save Changes

Activate the ISPAPI Pricing Importer Addon, fill your admin username and give the module "Full Administrator" Access Control right.

Addon configuration

Within the WHMCS Admin area, go to

Addons => **ISPAPI Pricing Importer**

You are now ready to quickly update your pricing list.

You are connected with test.user in OT&E Environment.

Use my own HEXONET costs	Use a HEXONET Price Class	Use a CSV file
Load	ADSF [▾] Load	Download a sample CSV file Browse… No file selected. Load

How can I update my prices?

In order to load and update your prices, simply follow the next steps:

Step 1 – Load prices

- Load your own HEXONET costs or a HEXONET price class or upload a CSV file
  - If you choose to upload a CSV file, you can download a sample CSV file.
  - Edit the generated CSV file by adding new TLDs with your new prices.

In the above screenshot, a price class is selected to load TLDs and prices of it.

Step 2 – Update prices

The following screenshot shows loaded TLDs and prices from a price class.

Quickly update your WHMCS domain pricing list 2.0 (or later version)

- You can now select TLDs that you wish to upload

ISPAPI Pricing Importer

STEP 1 - LOAD PRICES	STEP 2 - UPDATE PRICES	STEP 3 - IMPORT PRICES

Select the TLDs you want to import:

☐	TLD	Register	Renew	Transfer	Currency
☑	.com	10.00	20.00	15.00	USD
☑	.org	10.00	20.00	15.00	USD
☐	.pizza	10.00	20.00	15.00	USD

[Import]

- In this step, actual costs and selling costs of each TLDs are dispalyed.
- You can update the prices in bulk by using a factor or a fixed amount.
  - Or you can edit sale prices individually.
- Additionally, you can select currency with which you would like to sell each TLD.
- Furthermore, you can select domain addons.

Quickly update your WHMCS domain pricing list 2.0 (or later version)

- If you wish to change your selection of TLDs, the module allows you to go back to previous steps and make a new selection.

Domain Addons

➕ DNS Management   ➕ Email Forwarding   ➕ ID Protection   ➖ EPP Code

Import

To import large number(>1000) of TLDs at once

By default, the maximum number of input variables allowed for PHP scripts is set to 1000. If you would like to import TLDs more than 1000, the default value of maximum number of input variables is not sufficient. In order to to be able to import maximum number of TLDs, set 'max_input_var' value at least to 3000 in your php.ini file. For example, 'Use my own HEXONET costs' option from module loads more than 2000 TLDs.
